

Gaylussacia brachycera

Berried Treasure

Gaylussacia is an ice age survivor! One colony in Pennsylvania covers over a mile...at 6 inches per year growth, that would make this single colony over 10,000 years old!

Box Huckleberry is related to Blueberries and is self-fertile. It produces a long (3/4") drupe-like, blue fruit July to August.

Its leaves are glossy, minutely toothed, & lay almost flat along the stem. In Fall, they turn a brilliant red-burgundy.

Prefers full sun to partial shade, and well- drained humitic soil.

Wildlife & drought tolerant. Pollinator & wildlife friendly.

Common Name

'Berried Treasure'TM Box Huckleberry

Variety

Berried Treasure

Zone

Zone 5

Mature Size

12"H and spreading

Bloom Time

May - June

Plant Type

Groundcovers

Flower Color

White
