

Gaylussacia Brachycera

# Berried Treasure

Gaylussacia is an ice age survivor! One colony in Pennsylvania covers over a mile...at 6 inches per year growth, that would make this single colony over 10,000 years old!

Box Huckleberry is related to Blueberries and is self-fertile. It produces a long (3/4") drupe-like, blue fruit July to August.

Its leaves are glossy, minutely toothed, & lay almost flat along the stem. In Fall, they turn a brilliant red-burgundy.

Prefers full sun to partial shade, and well- drained humitic soil.

Wildlife & drought tolerant. Pollinator & wildlife friendly.

*Common Name*

**'Berried Treasure'<sup>TM</sup> Box Huckleberry**

*Variety*

**Berried Treasure**

*Zone*

**Zone 5**

*Mature Size*

**12"H and spreading**

*Bloom Time*

**May - June**

*Plant Type*

**Groundcovers**

*Flower Color*

**White**
