

Photinia P. Glabra and P. Serrulata

Red Robin

'Red Robin' is an improved cultivar of the straight species. It is more compact, and has brighter red color on the new foliage, lasting 2-3 weeks. It is also reported to have better resistance to leaf spot, *Entomosporium maculatum*. The leaves mature to leathery, oval, dark green, to 3-4" long. Additional pruning may encourage new flushes of red leaves. Late Spring pruning has the added benefit of discouraging unpleasant fragranced flowering.

For best color and to discourage leaf spot, it is suggested to plant in the full sun, with good air circulation, and avoid overhead watering.

Common Name

'Red Robin' Photinia

Variety

Red Robin

Zone

Zone 7

Mature Size

12'H x 12'W

Bloom Time

April-May

Plant Type

Evergreen Shrub

Flower Color

White
