Vitis labrusca

Himrod

Royalty Fee

'Himrod' is a self-pollinating, seedless American grape. It is a woody, deciduous, climbing vine, typically growing 15 to 20′ long unless pruned. Large, shallow-cut, three-lobed, green foliage is tropical-like. Panicles of fragrant, greenish flowers appear in Spring, followed by clusters of white seedless grapes, in early season (early August in USDA Zone 5). The fruit matures to a golden yellow and is good for fresh eating and drying.
Best fruiting in full sun, in well drained soil, but tolerates light shade & heavier soils. Good drainage is a must, and protection from harsh winds.
Relatively wildlife & drought tolerant after establishment.
Very pollinator & wildlife friendly.

Common Name
'Himrod' Green Seedless Grape

Variety
Himrod

Zone
Zone 5

Mature Size
20'H x 20'W

Bloom Time
April-May

Plant Type
Fruits

Flower Color
Greenish White
