

Carex cherokeensis

Cherokee Sedge

This sedge forms attractive, slowly-spreading clumps of 6-12" tall fine-textured, narrow, grass-like, deep green leaves. It is grown in the landscape for its foliage effect. Greenish-white flowers in spring are insignificant. Wheat-like seed spikes mature in autumn.

Grow in medium to wet soils in full sun to part shade. Thrives in moist soils, but also may do well in average garden soils.

Common Name

Cherokee Sedge

Zone

Zone 6

Mature Size

12"H x 12"W

Bloom Time

Spring

Plant Type

Grasses
