Our Colorful New Twist on a Pacific Coast Native!

Distinctive, variegated foliage sets this versatile evergreen apart from other Huckleberries. Finely serrated leaves are vivid coral when they emerge, gradually turning green with creamy variegations. Racemes of pale pink, urn-shaped flowers bloom in spring, followed by glossy purple-black, edible berries in summer - providing multiple seasons of interest. Performs well in both shade or sun, tolerates many soil types, but prefers acidic soil that is moist but well-drained. Attracts hummingbirds and butterflies - deer resistant also!

- USDA Zones 7 to 9
- Neat, upright, evergreen shrub
- Mature size 4'x4' tall and wide
- Variegated foliage; red new growth
- Pale pink, urn-shaped flowers in spring
- Glossy, purple-black, edible berries in summer
